Summary

Mobile engineer who owns products end to end, from architecture and backend to store releases and production support. At K12 Techno Services I own **6 production apps** and the **BASE** learning platform, run the **deployment cycle for the entire mobile team**, have shipped **100+ store releases**, and **mentored 2 developers**.

Experience

App Developer — K12 Techno Services Pvt. Ltd. *Jun 2025 – Present*

BASE: JEE/NEET coaching platform Flutter, Django, React, Kubernetes

- Own it end to end, from architecture to production: Flutter app, Django/DRF backend, React admin, Kubernetes
- Built **HLS live classes** on Cloudflare Stream (OBS ingest, auto-recording) with Centrifugo chat for **50k+ users**
- Built an **AI study assistant** for lectures, PDFs and screen regions, streaming answers via a metered LLM proxy
- Offline-first assessments on an async psycopg pool with checksum-verified sync; rate-ramped FCM push at 50k DAU
- Ran pre-launch **k6 load and stress tests**; added Sentry error tracking, PostHog analytics and Clarity session recordings

Eduvate Admin: staff app Flutter

- Built the **Order Management System** (clean architecture, BLoC): live pricing, geo check-in, e-sign, RBAC
- Rebuilt uploads as **signed-URL direct-to-GCS** with retry and compression: failures **30+/day → 0**
- Built ByteLearn video learning: in-video quizzes, camera attention tracking, Django API with Cloud Storage signed URLs

Orchids School Connect: parent app Flutter

- Designed **resumable GCS uploads** with a Django control plane: exactly-once sessions, offset resume, Celery
- Built live bus tracking over a vehicle WebSocket with a trip state machine; camp registration with Easebuzz payments
- Introduced **Shorebird OTA code push** and Crashlytics, so hotfixes ship same day without store review

MySchoolGate: face-recognition attendance kiosk Flutter, TFLite, ML Kit

- Offline face recognition: ML Kit detection, TFLite embeddings, cosine matching, Drift DB, isolate inference
- **Offline-first sync**: kiosks mark attendance with no network, then batch-upload records and photos once back online

Eduvate B2B: white-label school LMS React Native, Expo

- Owned the LMS for teachers and students: lesson plans, homework, assessments, e-books, attendance, fees
- Built an **HSL theming engine** and white-label pipeline with custom **Expo config plugins**, per-school branding
- Built **cross-platform** for phones, tablets and **interactive classroom panels** with QR login and a shared uploader
- Made it run on **low-end devices and Android 8/9**, adding a custom network stack for servers without TLS 1.2 support

Team leadership

- Run the **end-to-end deployment cycle** for the mobile team: Codemagic CI/CD, TestFlight, Play/App Store review
- **Mentored 2 developers** in mobile development; lead code review; production escalation point for six apps
- Wrote an internal Flutter/Django training course with assessments and an auto-scored coding task

Technical Skills

Languages	Dart, TypeScript, JavaScript, Python, C++
Mobile	Flutter (BLoC, Riverpod, Drift, isolates, platform channels), React Native / Expo, Android
Backend	Django/DRF, Celery, PostgreSQL, Redis, Centrifugo, Next.js
Release & Quality	Shorebird, Codemagic, TestFlight, Play/App Store compliance, k6, unit/widget tests

Education

Indian Institute of Technology, Kanpur — B.Tech, Electrical Engineering *2021 – 2025*
CPI 7.0/10 Class XII (RBSE) 88.8% | Class X (RBSE) 90.0%

Projects

LumaCaption: AI video caption editor lumacaption.com React, TypeScript, Supabase, Razorpay

- Built and run it alone, with paying users: Supabase auth, Edge Functions, Razorpay subscriptions via webhooks
- Transcription in 93 languages via ElevenLabs Scribe and Groq Whisper, with provider fallback and server-enforced quotas
- Customised a Hinglish Whisper fine-tune: MMS forced alignment for word timestamps, Silero-VAD chunking, CTranslate2 inference and a repetition-retry guard; deployed on **Modal serverless L4 GPUs** at **∼60% lower cost** than ElevenLabs

Blinzo: video chat platform blinzo.chat Next.js, WebRTC, Socket.io, Node.js

- Built and run it alone: interest-scored matchmaking over **Socket.io**, **WebRTC** P2P calls, PWA
- Self-hosted a **Coturn** TURN relay with HMAC ephemeral credentials for symmetric-NAT users where STUN fails
- Silent ICE-restart reconnection for flaky networks; on-device NSFW detection (TensorFlow.js) and tiered bans
